

**Short course    The Amazon River from late Tertiary to present: paleogeographic reorganization of the basin, Quaternary record and present morphodynamics**

September 4, 2015, Iquitos, PERU

**Contact person:** Dr. E. Latrubesse (latrubesse@austin.utexas.edu)

**Lecturer:** Dr. E. Latrubesse<sup>1</sup>

<sup>1</sup>Department of Geography and the Environment, The University of Texas at Austin, USA

**Language of instruction:** English

A one-day fluvial excursion discussing the region's geology and geomorphology will be offered. The participants will travel in small boats along the Amazon River while visiting key geological and paleontological localities of the Late Cenozoic morpho-stratigraphic and paleoecological record of western Amazonia. During the trip, paleogeographic models on the reorganization of the Amazon fluvial basin during the Neogene will be presented and Quaternary terraces will be observed. We will debate as well the present day morphodynamics and fluvial geomorphology of the Amazon.

More information in the coming weeks.
